

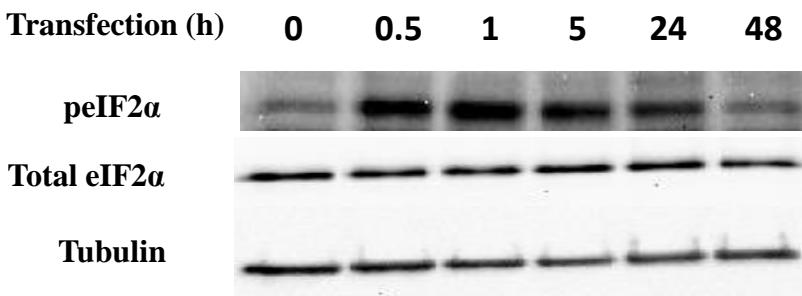

Figure 1– figure supplement 1. Levels of pelf2 α return to baseline 48h following application of tRNA

A.

B.

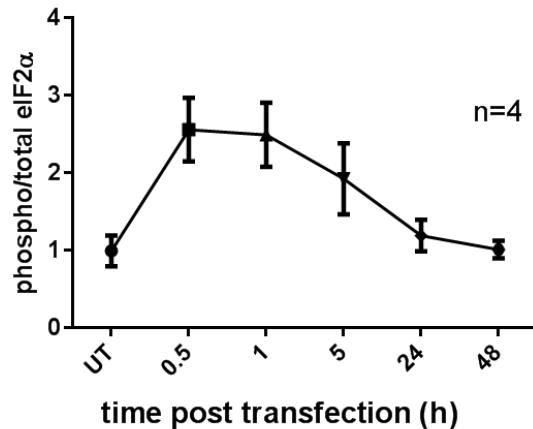

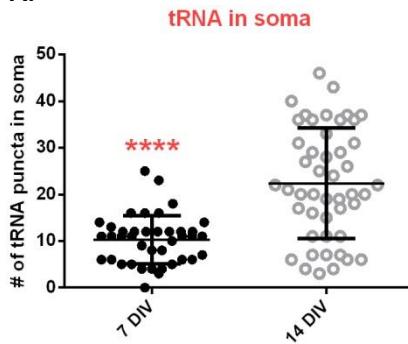

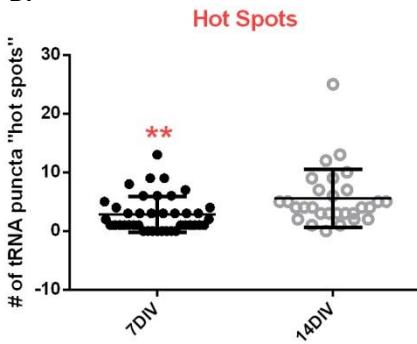

Figure 1 – figure supplement 2. Mature culture has more tRNA puncta in the soma and more condensed tRNA puncta regions (“hot spots”) in comparison to young culture.

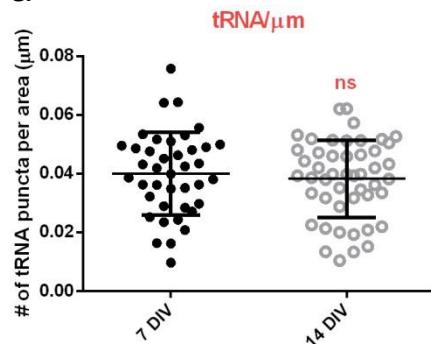

A.

B.

C.

D.

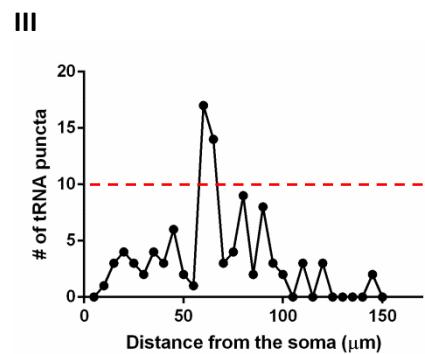

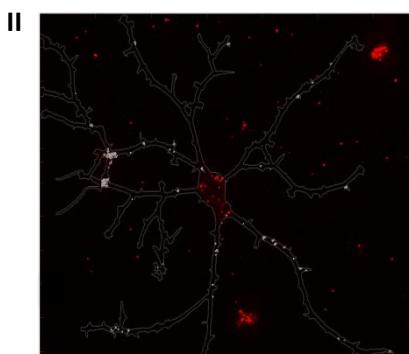

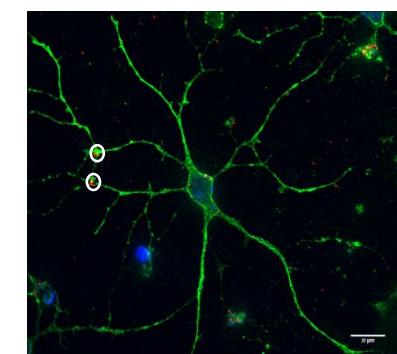

Figure 2 – figure supplement 1. Total amount of tRNA puncta remains unchanged in all measured time points

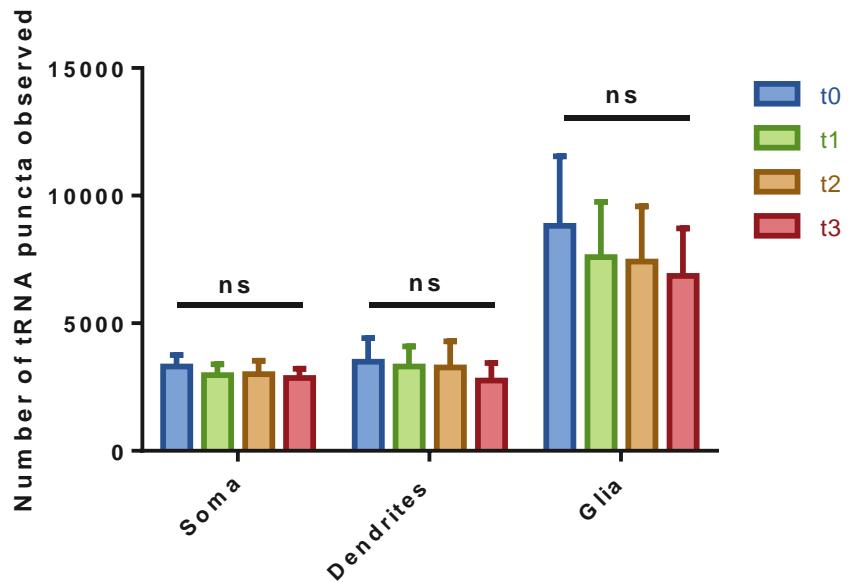

Figure 4 – figure supplement 1. Determination of the spatial resolution of dSTORM

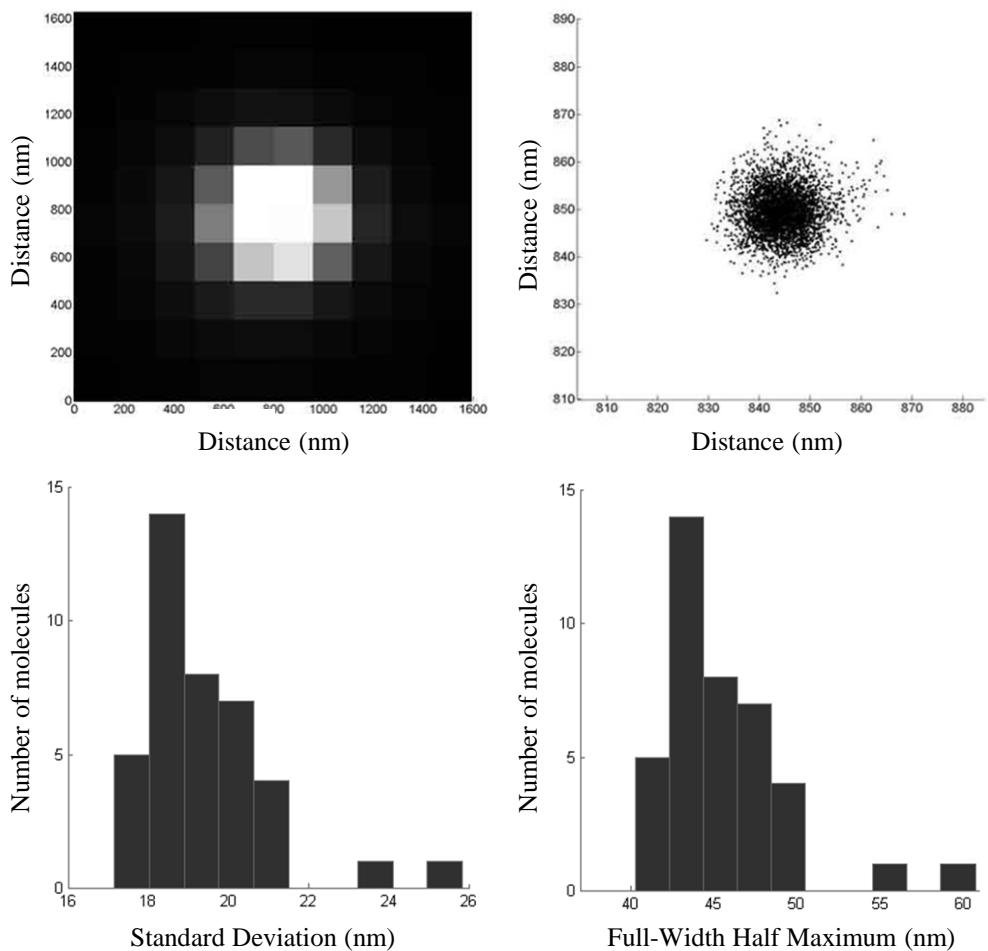

Figure 5 – figure supplement 1. Illustration of a Microfluidic chamber

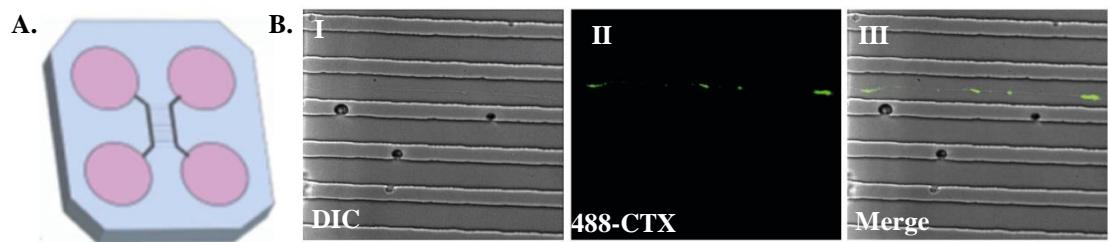

Figure 6 – figure supplement 1. Biphasic pattern of mRNA translation up-regulation is apparent in both neuronal somata and dendrites separately

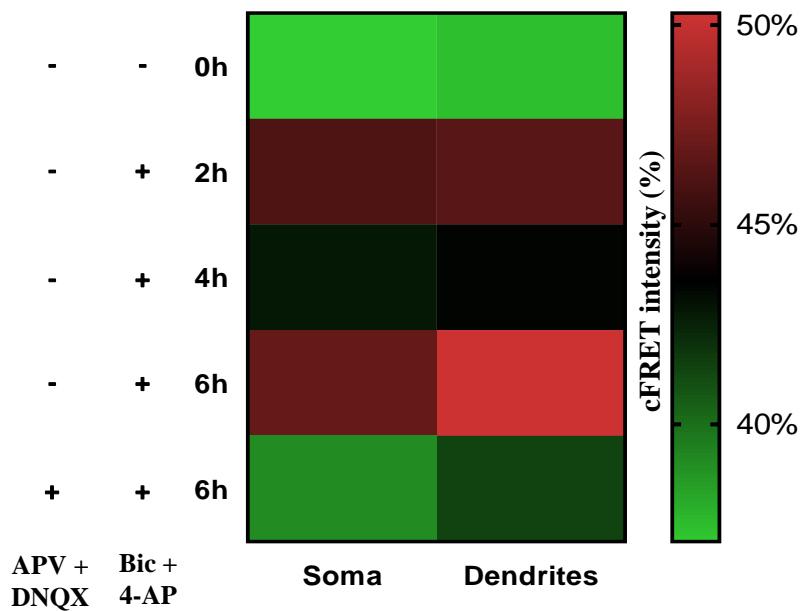

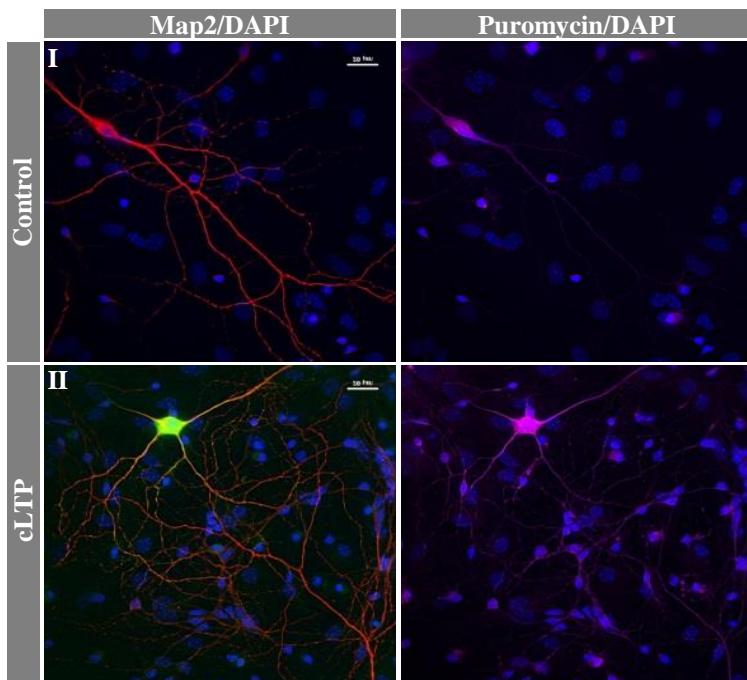

Figure 6 – figure supplement 2. Immunocytochemical SUneSET shows mRNA translation up-regulation following cLTP

A.

B.
