**Figure S4. Annotation of litter-associated genes in clusters C0 and C1.** (a) Word of all genes in cluster C0 with an annotation that are significantly up-regulated (FDR  $\leq$  0.05) in MGLi vs. CMMm. (b) Word of all genes that are clustered in cluster C1 and up-regulated (FDR  $\leq$  0.05) when MGLi is compared to CMMm.
