

**Supplementary note 1.** cTP-net models tested on CITE-seq PBMC data sets

Table S5 illustrates the different models we have tested. The first column indicates the differences to the finalized models, while the second column shows the correlation of the predicted protein abundance to the true protein abundance in the holdout setting on CITE-seq PBMC data set. As shown by Table S5, missing any component of the final model will result in inferior performance.
