

Supplemental Information

Table S1, Related to Figure 1. Summary characteristics of the Leigh syndrome patient derived fibroblast cell lines including the patient phenotype at diagnosis, the mutations identified, and published literature using the cell line.

Table S2, Related to Figure 4. Day 10 LS derived neutralized embryoid bodies relative metabolite abundance for metabolites used in pathway analysis. LC-MS measured metabolite peak areas were normalized to the total ion count (TIC) by sample and fold change was determined by dividing each LS TIC normalized peak area by the control TIC normalized peak area for each metabolite. Metabolites were identified and filtered for pathway analysis using a threshold fold change (FC >5 and <0.4). Fold change values shown are averages for 2 independent runs with ~150 neutralized EBs per run.

Table S3, Related to Figure 4. Summary of the metabolic pathways analysis for metabolites enriched in day 10 LS derived neutralized embryoid bodies. Statistical p values from enrichment analysis are adjusted for multiple hypothesis testing. Total: total number of compounds in the pathway. Hits: matched number from the uploaded data. Raw p: original p value calculated from the enrichment analysis. Holm p: p value adjusted by Holm-Bonferroni method. FDR p: adjusted p value using False Discovery Rate. Impact: pathway impact value calculated from pathway topology analysis.

Figure S1, Related to Figure 2. Characterization of Leigh syndrome iPSCs. A. Schematic representation of the fibroblast reprogramming protocol. B-C. Pluripotency characterization of the LS iPSCs. Samples were analyzed against samples in a reference data set (The International Stem Cell Initiative, 2018) (B). The distribution of the samples compared with a non-iPSC control shows clustering of the samples in the high pluripotency and low novelty quadrant (C). D. qPCR

for the pluripotency genes *POU5F1* and *NANOG*. E. Karyotype characterization results for LS and control cell lines.

Figure S2, Related to Figure 3. Leigh syndrome derived NPCs are multipotent and do not present increased sensitivity to pharmacological stressors. A. Quantification of protein expression of neural markers Pax6, Nestin and Sox2. B. Leigh syndrome NPCs do not show enhanced sensitivity towards different stressors. LS NPCs have similar cell viability compared to control when exposed to the DNA damaging agents etoposide and neocarzinostatin, the mitochondrial toxicant CCCP, and the microtubule destabilizer nocodazole.

Figure S3, Related to Figure 5. MT-ATP6/PDH brain organoids display defective differentiation at day 10. A. Brightfield images (4X) of day 10 brain organoids. MT-ATP6/PDH shows disorganized cellular growth that do not resemble neuroepithelial buds. B. Quantification of the defective organoids at day 10 by cell line.

Figure S4, Related to Figure 7. Heat map of metabolomic analysis of day 40 organoids. A total of four batches of 40-day organoids per line were analyzed as described in methods. Each column represents a replicate and each row represents a metabolite. Relative abundance is independently scaled by row with higher z scores represented by red color and lower z scores represented by blue color.

Cell line	Phenotype	Mutation	References
GM03672	1 y/o female, Caucasian. Developmental regression; microcephalic; elevated blood lactic acid and pyruvate; only affected family member	PDH (E1) LOF Pyruvate dehydrogenase (79delC, Arg27fs)	Hinman et al. 1989; Huh et al. 1990; Johnson et al. 2018
GM01503	3y/o female, Caucasian. Lactic acidosis, psychomotor delay; sister also affected. Subnormal activation of pyruvate dehydrogenase complex in disrupted fibroblasts	DLD (E3) Dihydrolipoamide dehydrogenase (A100G, Thr34Ala)	Cooper et al, 1969; Murphy JV, 1973; Sorbi& Blass, 1982; Hinman et al. 1989; Huh et al. 1990; Vo et al. 2007; Johnson et al. 2018
GM13411	8 month old male, Chinese. Lactic acidosis; developmental delay. Hypertrophic cardiomyopathy. Symmetric neural necrosis. Fibroblast: 90% heteroplasmy	MT-ATP6 (T8993G, Leu156Arg) PDH (E1) LOF Pyruvate dehydrogenase (79delC, Arg27fs)	Pastores et al. 1994; Iyer et al.2012; Ma et al. 2014; Galera-Monge et al. 2016; Zheng et al. 2016; Johnson et al. 2018
