

Projecting ancient ancestry in modern-day Arabians and Iranians: a key role of the past exposed Arabo-Persian Gulf on human migrations

Supplemental Figure 1: Principal components analysis of present-day samples from the Arabian Peninsula (blue), Iran (red) and neighbouring populations (grey, to avoid visual clutter) with projected ancient samples in different colours and formats according to the legend. Abbreviations are as follows: E, Early; M, Middle; L, Late; HG, hunter-gatherer; N, Neolithic; C, Chalcolithic; BA, Bronze Age; IA, Iron Age; UP, upper Palaeolithic; EPI, Epipaleolithic.

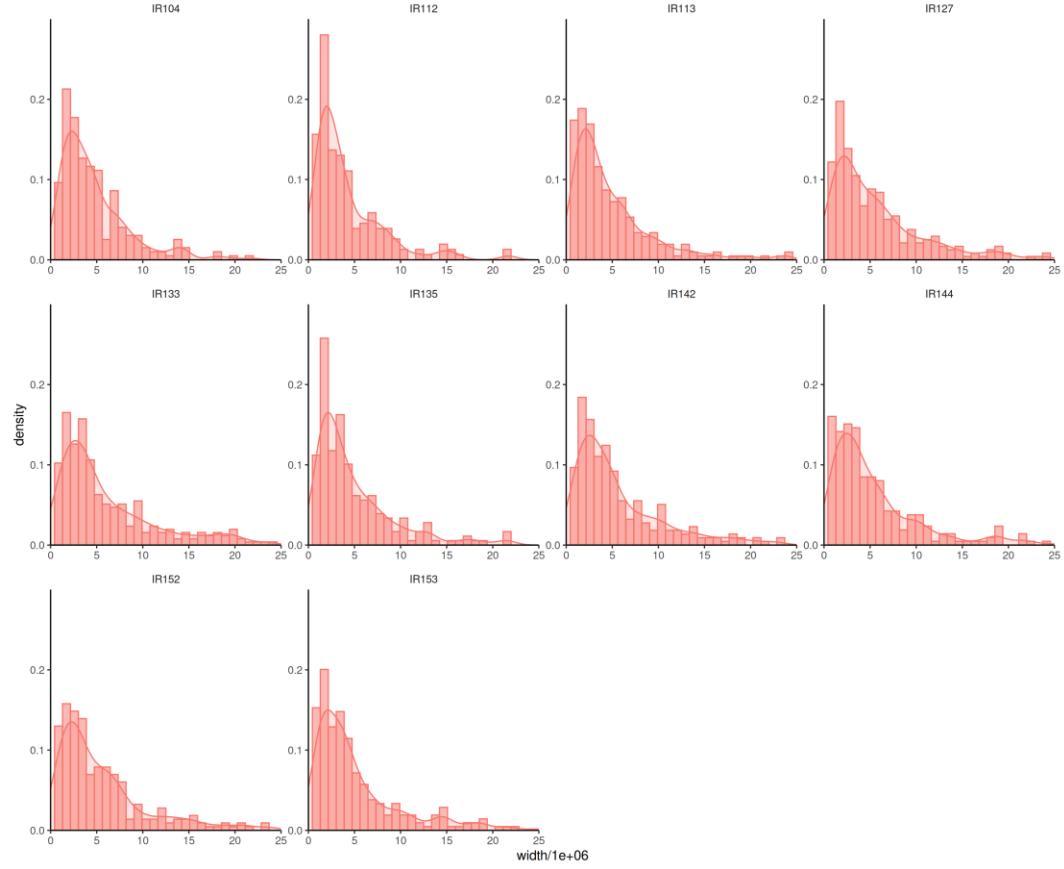

Supplemental Figure 2: Principal components analysis of present-day individuals.

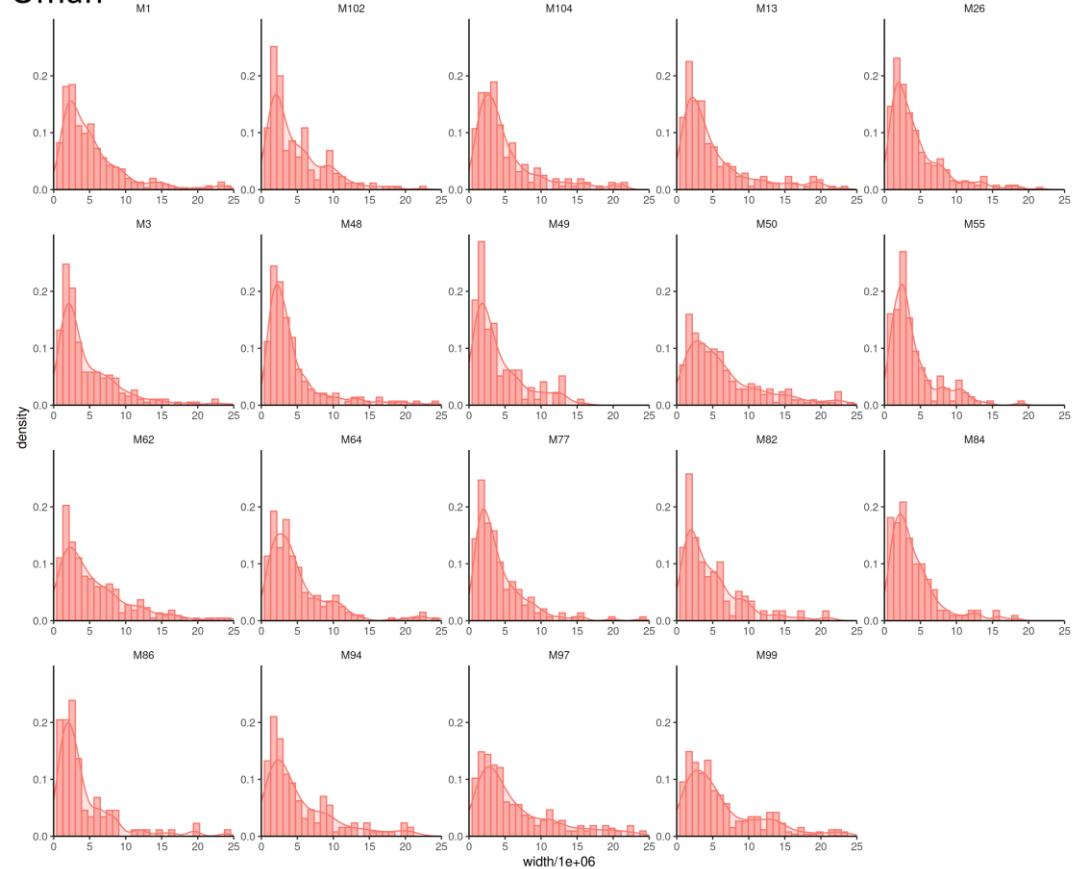

Supplemental Figure 3: Hierarchical clustering tree from which were clusters based on sample geographical locations were inferred.

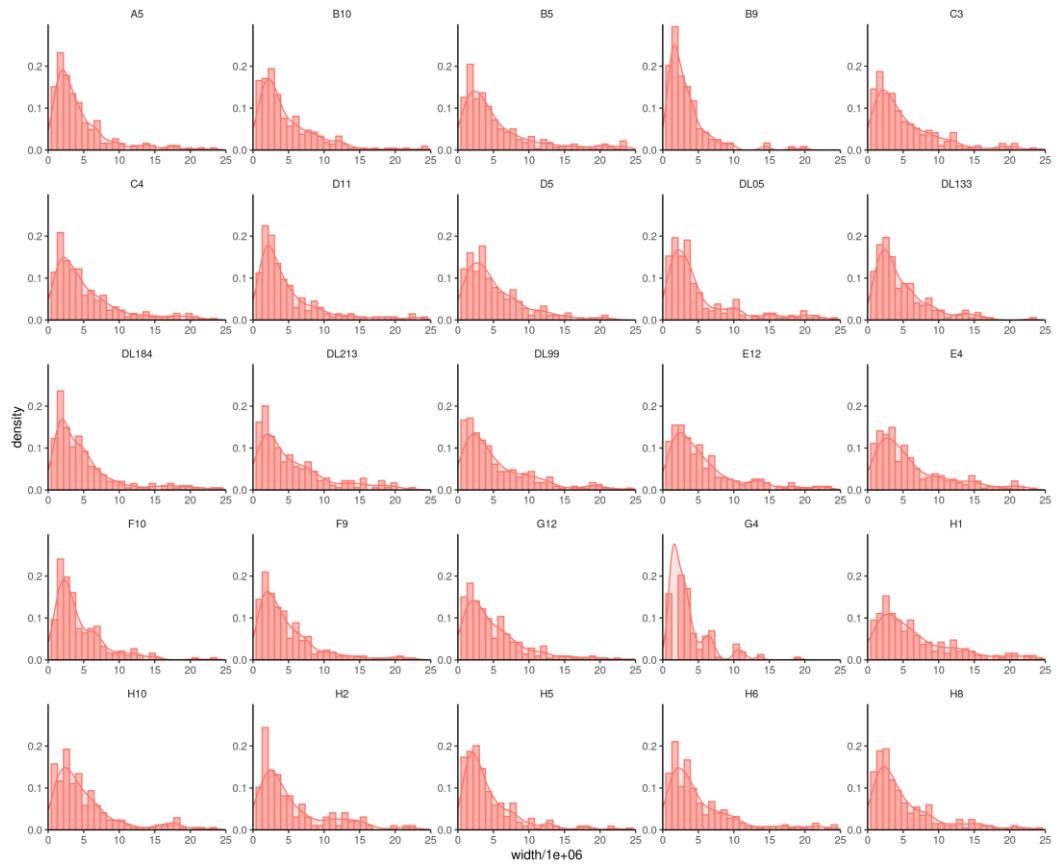

Iran

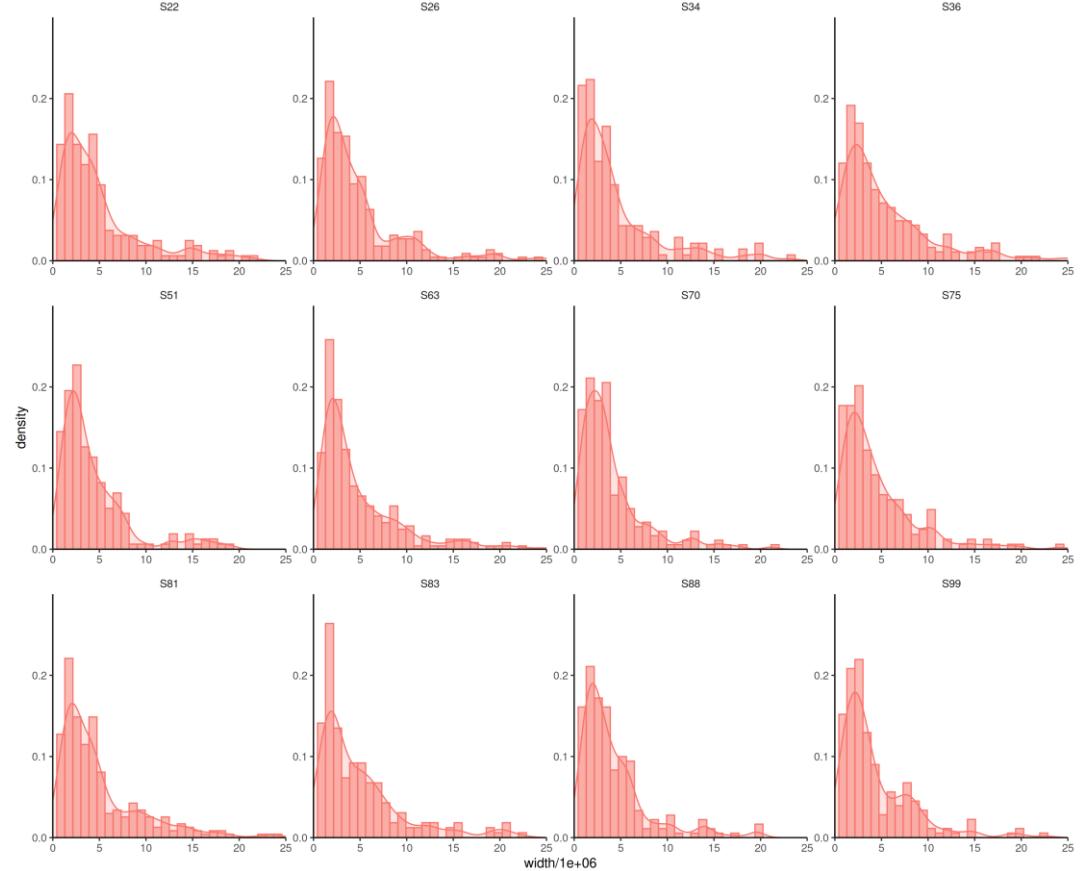

Oman

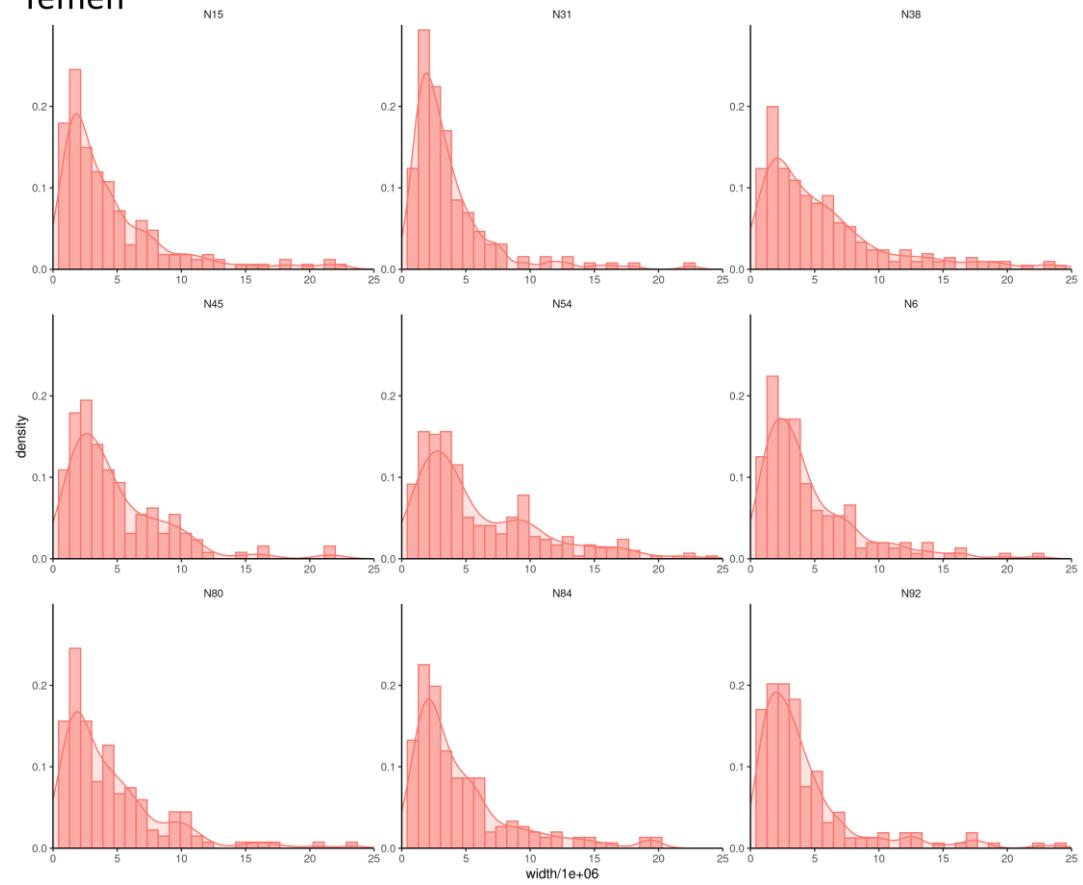

UAE

Saudi Arabia

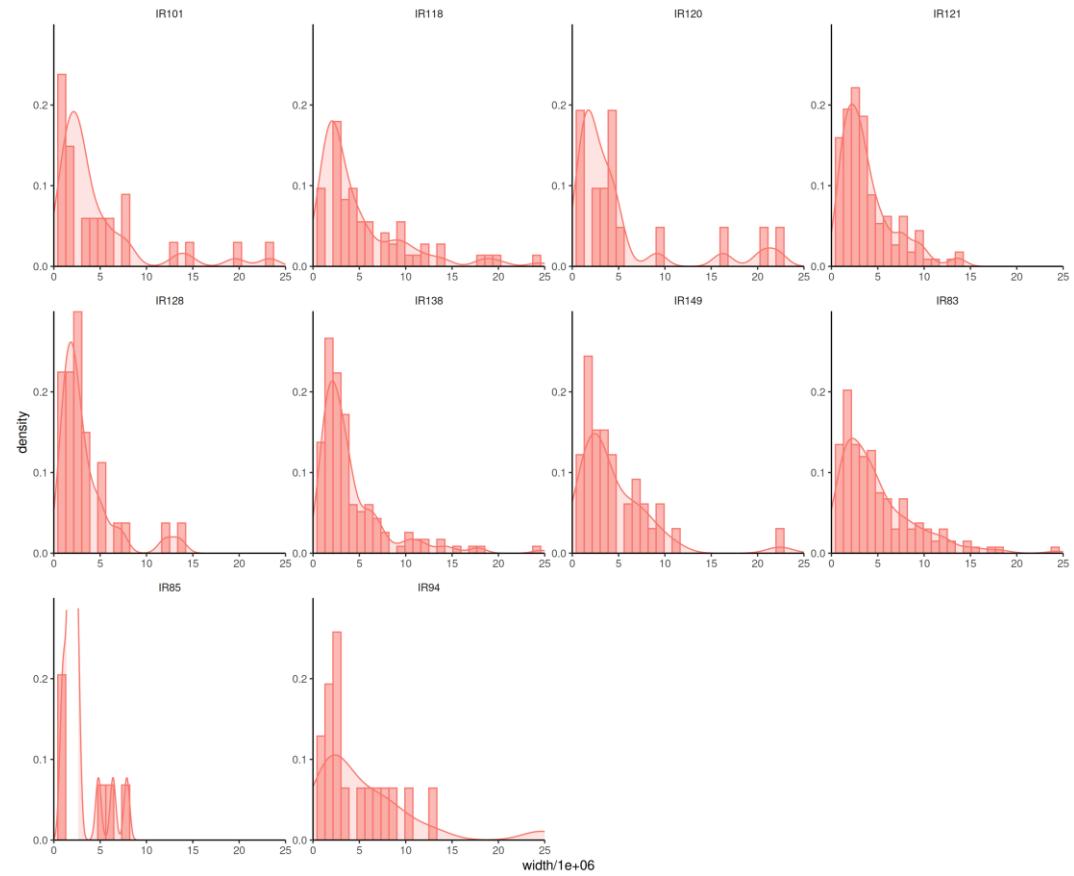

Yemen

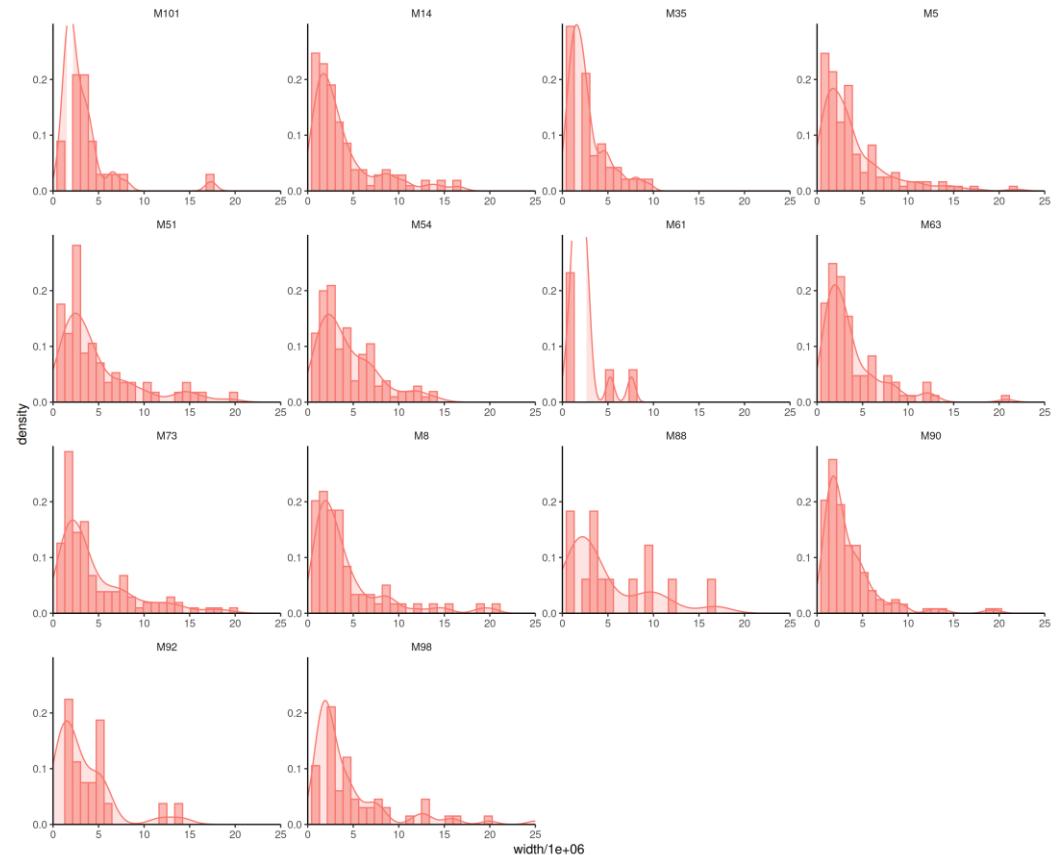

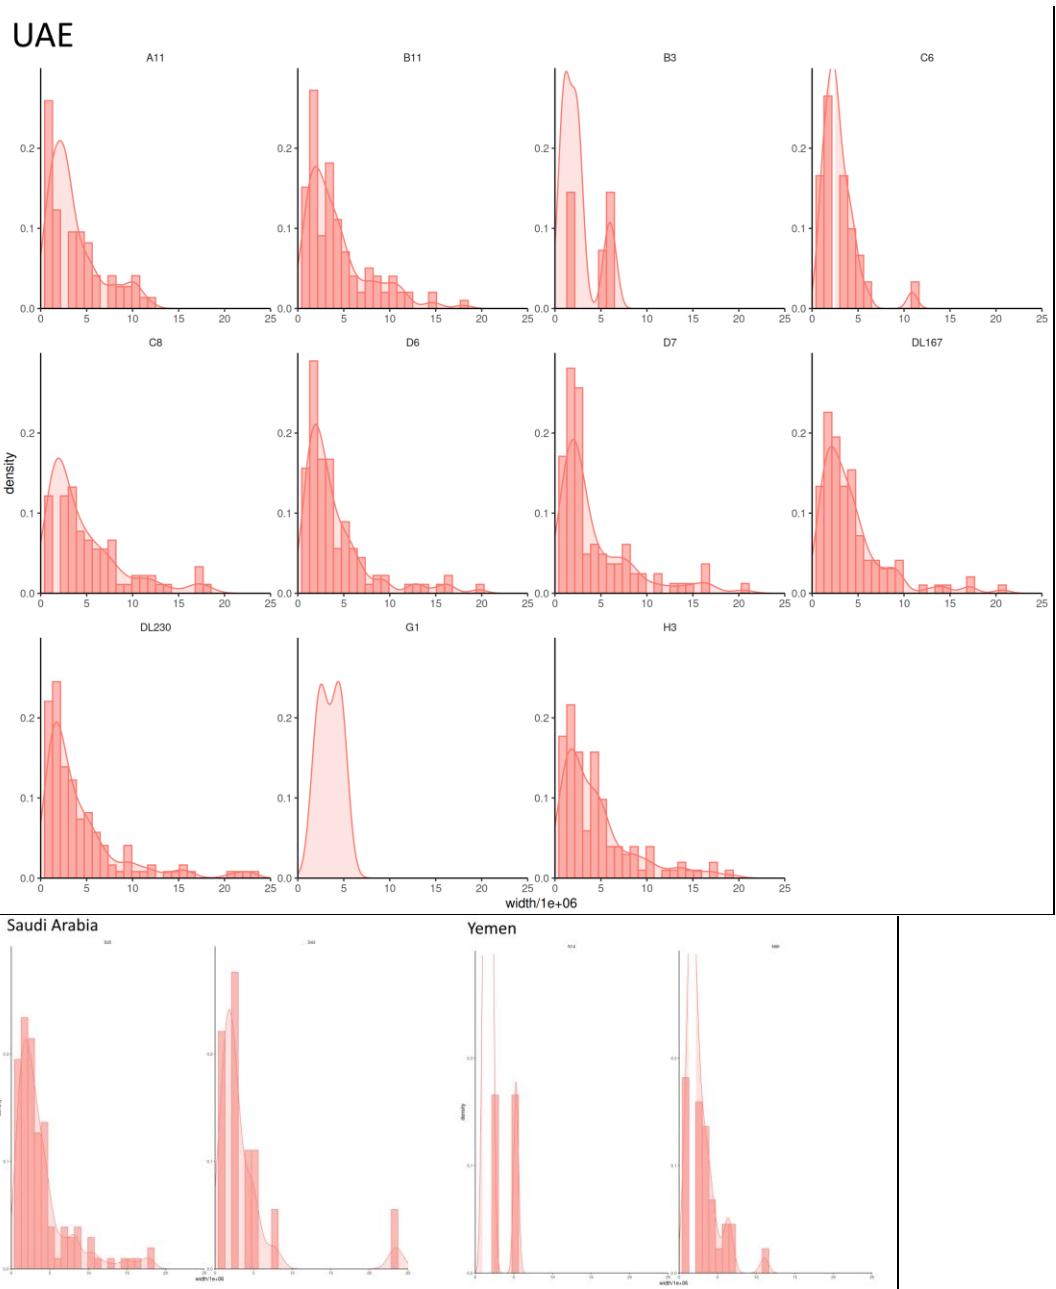

Supplemental Figure 4: Median sizes (in cM) of the sub-Saharan African blocks estimated per AP and Iranian individuals affiliated in cluster A.

Iran

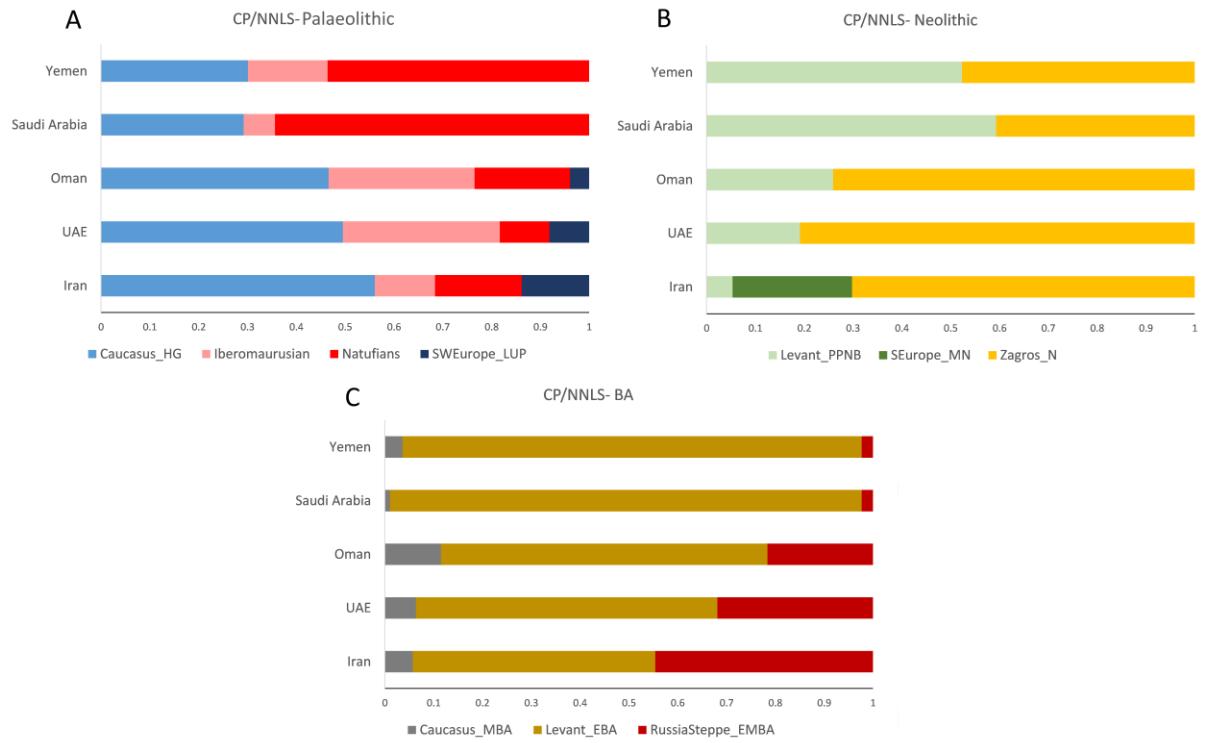

Oman

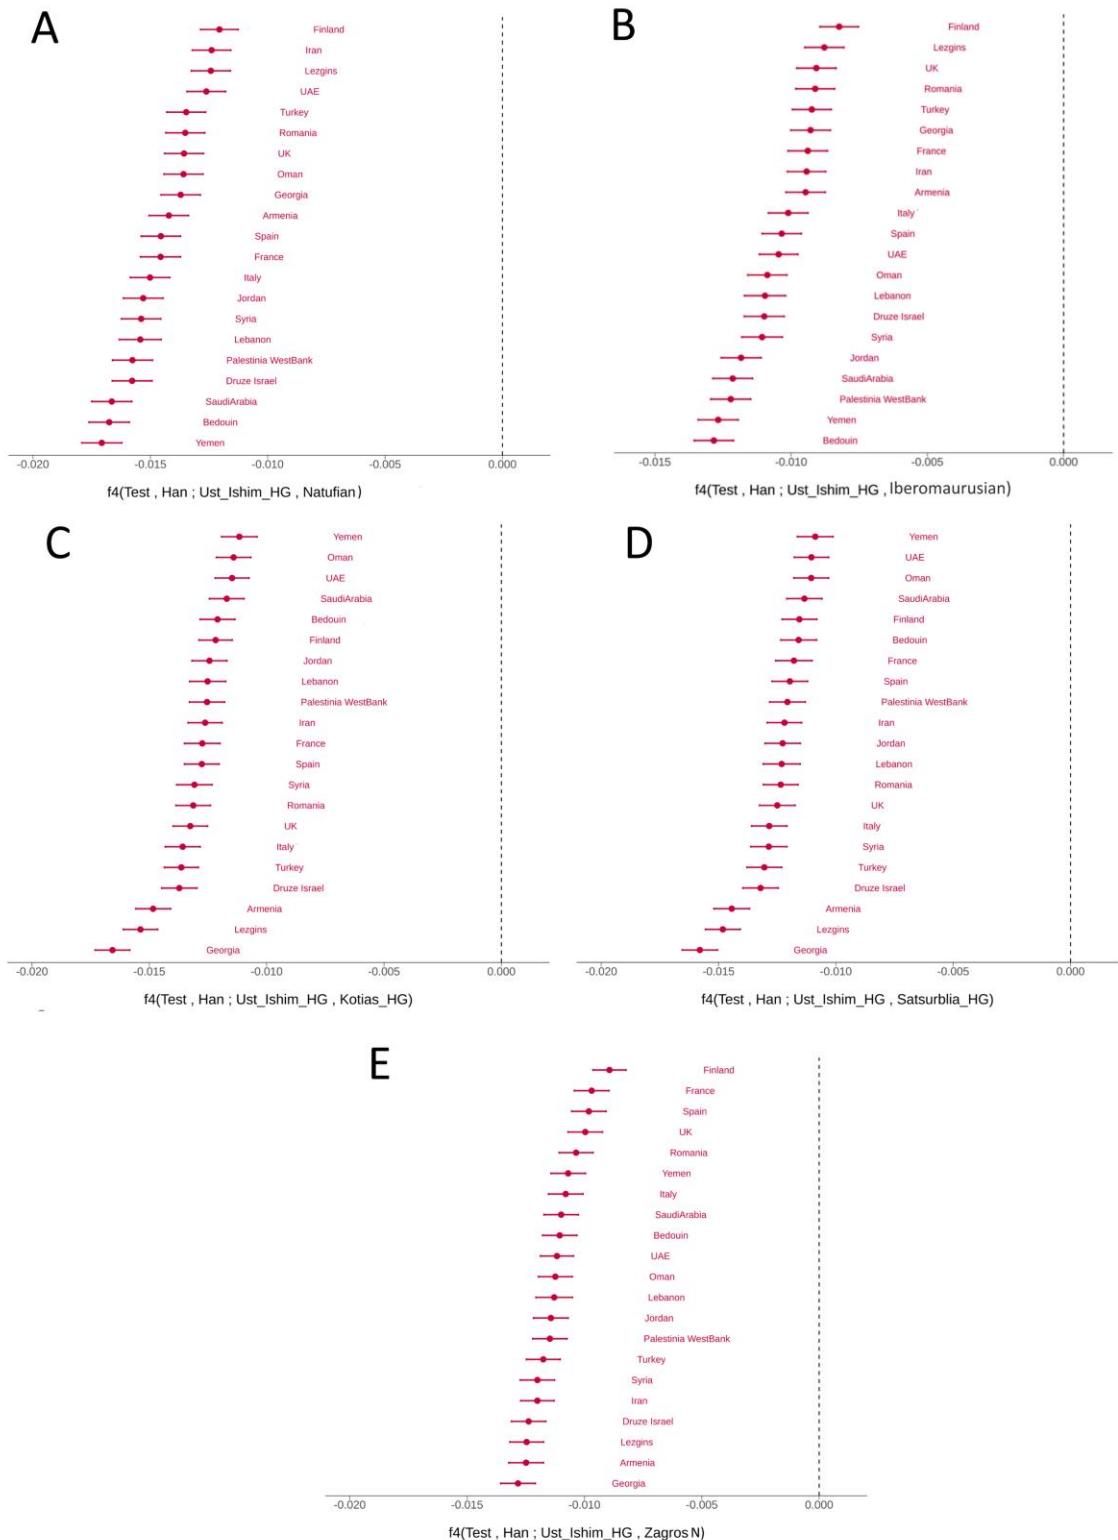

Supplemental Figure 5: Median sizes (in cM) of the sub-Saharan African blocks estimated per AP and Iranian individuals affiliated in cluster D.

Supplemental Figure 6: Population-based ancestry estimates for all the modern populations inferred by CHROMOPAINTER via an NNLS-based analysis. A, Palaeolithic period; B, Neolithic period; C, Bronze age period. Abbreviations are as follows: E, Early; M, Middle; L, Late; HG, hunter-gatherer; N, Neolithic; BA, Bronze Age; UP, upper Palaeolithic.

Supplemental Figure 7: Alternative testing of the statistic $f4(\text{Test}, \text{Han}; \text{Ust}'\text{-Ishim}, \text{X})$, where Ust'-Ishim and X were used as proxies for non-basal and basal Eurasian lineage, respectively. The X was a rather recent ancient specimen of admixed basal Eurasian ancestry:

Levant pre-Neolithic Natufian (A); North Africa Iberomaurusian (B) Caucasus Kotias hunter-gatherer (C); Caucasus Satsurblia hunter-gatherer (D); and Iranian Zagros (E) farmer. The bullet identifies significantly negative values (Z -score < -3). All the tested samples were modern populations.

Table S1: Modern samples used in this study.
