

Tessier et al. Figure Supplementary 3

Supplementary Figure 3.

(a) Heat map analysis of total APL proteome (LFQ LC-MS/MS) upon arsenic treatment. The different clusters are indicated on the right with their associated GOBP signatures. (b) Proximity ligation assays showing interaction (<40nm) between endogenous PML and NFIL3 or MORC3 (red dots) in the indicated mESCs. Dapi (blue), scale bar: 5µm.
