

Supplemental Figure 6. Binding of CTE-19.20-His to murine and human antigens. A) 293T cells transfected with murine CD20 cDNA express mCD20 as assessed using an anti-mCD20 antibody (left) but do not bind to CTE-19.20 across a range of concentrations from 2 to 0.02 $\mu\text{g/ml}$. B) The positive control samples using 293 T cells transfected with human CD20 are shown. C) CTE-19.20-His protein binds to murine albumin in an ELISA assay.
