

Supplemental Tables

Tab. S1. Duplications and larger expansions of chemosensory gene families.

Tab. S2. Homology of OR subfamily tandem arrays.

Tab. S3. Gene numbers per OR subfamily for all bee species examined.

Tab. S4. Patterns of selection in chemosensory genes between orchid bee species pairs

Tab. S5. Branches under selection.

Supplemental Datasets

Dataset S1. Contains detailed results of the selection analysis, homology of genomic locations of non-OR chemosensory gene families, and all chemosensory gene sequences annotated.

Locations of tandem arrays corresponding to OR subfamilies are indicated by scaffold numbers for each species. In case the assembly was fragmented into multiple scaffolds, scaffolds are listed in order that matches homolog regions of the other species. Tandem arrays with homologous locations throughout the corbiculate bees are indicated by Y otherwise by N. Brackets indicate scaffolds that carried no ORs but were homologous to other species scaffolds carrying ORs. NA: not tested due to assembly fragmentation. *: Outgroup of G is only found in the honey bee and on a different chromosome. 'Out': Indicates the outgroup of a subfamily found in a different location than the rest of the ORs in the subfamily. A: Honey bee. E: Orchid bee. B: Bumble bee. M: Stingless bee.

9Exon corresponds to OR Subfamilies G05B, G04A, G11B, G12A, and G11A. †indicates species with transcriptome information only. * indicates expressed ORs with nonsense stop codon that were defined as pseudogenes. Numbers in () indicate incomplete ORs of length<300AA and [] indicates OR pseudogenes of total number.

Tab. S4

Gene family	<i>Eg. dilemma - Eg. viridissima</i>	<i>Eg. flammea - Eg. imperialis</i>	<i>El. bombiformis - El. meriana</i>
