

Supplementary Figure 4. P-value of genome-wide significant regional SNPs with global control compared to their P-value in the global measure for a) surface area and b) thickness. Effect size of genome-wide significant regional SNPs with global control compared to their effect size in global measures for c) surface area and d) thickness. Effect size of genome-wide significant regional SNPs with global control compared to regional SNPs without global control in e) surface area and f) thickness.
