

Supplementary Figure 3: Type I collagen deposition is not perturbed by the absence of type II collagen in *col11a2* mutants. Immunostaining for type I (red) and type II (green) collagen in wt and *col11a2*^{-/-} at 5 and 7 dpf. Dashed insets show areas of type II collagen loss at higher magnification. White arrows indicate areas of type II collagen loss, where type I collagen is unchanged. Scale bar = 100µm.
